cc and which patients may need restorative therapy. The NOVX protein may calso be used as antigens in the production of antibodies (Abs) against convex and in assays to identify modulators of NOVX expression and cativity. The anti-NOVX Abs and antagonist are used to down regulate expression and activity. The anti-NOVX Abs are used for detecting the presence of NOVX in samples. Disorders that may be prevented, diagnosed and/or treated vary depending on the NOVX protein. NOVI, expression by rectifying mutations or deletions in a patient's genome that affect the activity of protein by expressing inactive proteins or t supplement the patients own production of protein. They are used to produce NOVX proteins, by inserting the nucleic acid into a cell and culturing it to express the protein. The DNA may be used as DNA probes i assays to detect and quantitate the presence of smillar DNAs in samples. Cytostatic; contraceptive; antiinflammatory; immunomodulatory; and cardiovascular activities. The sequences may be used in the prevention diagnosis and treatment of diseases associated with inappropriate NOVX cellular adhesion disorders. NOV6-10 are homologous to EGF-like fibrillin proteins and are used to treat cardiovascular disease e.g hypertrophic cardiomyopathy, long-QT syndrome and marfan syndrome. used to treat cancers, inflammatory disorders, immune disorders and the s sequence is the NOV8 protein. The invention relates to MOV1-NOV16 proteins, and their coding sequences. The proteins have They may be used to treat disorders associated with decreased in the prevention, ç

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Qy
This sequence is the NOV6 protein. The invention relates to the NOV1-NOV16 proteins, and their coding sequences. The proteins have Cytostatic; contraceptive; antiinflammatory; immunomodulatory; and cardiovascular activities. The sequences may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate NOVX expression. They may be used to treat disorders associated with decrease expression by rectifying mutations or deletions in a patient's genome that affect the activity of protein by expressing inactive proteins or supplement the patients own production of protein. They are used to produce NOVX proteins, by inserting the nucleic acid into a cell and culturing it to express the protein. The DNA may be used as DNA probes assays to detect and quantitate the presence of similar DNAs in samples and which patients may need restorative therapy. The NOVX protein may
                                                                                                                                                                                                                                                                                                                                                                                                                                    19-NOV-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC also be used as antigens in the production of antibodies (Abs) against CC NOVX and in assays to identify modulators of NOVX expression and CC activity. The anti-NOVX Abs and antagonist are used to down regulate CC expression and activity. The anti-NOVX Abs are used for detecting the presence of NOVX in samples. Disorders that may be prevented, diagnosed CC and/or treated vary depending on the NOVX protein. NOV1, NOV5, NOV5.

CC NOV7, NOV9-11 and NOV13-16 have casein kinases II phosphorylation sites CC characteristic of serine/threonine kinases, and are used to treat CC kinase-related disorders (e.g. Peutz-Jeghers syndrome, cellular CC kinase-related disorders (e.g. Peutz-Jeghers syndrome, cellular CC proliferation and contraception). NOV2-3, NOV6 and NOV8 are homologous to CC the epidermal growth factor (EGF)-like super family and are involved in, cell regulation of cell development, apoptosis, cell adhesion, growth CC migration, cell structure and motility and protein management, and are used to treat cancers, inflammatory disorders, immune disorders and CC cellular adhesion disorders. NOV6-10 are homologous to EGF-like CC cellular adhesion and are used to treat cardiovascular disease e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   NOV; Cytostatic; contraceptive; antiinflammatory; immunomodulatory; cardiovascular; casein kinase; plotshorylation site; contraception; serine/threonine kinase; Peutz-Jeghers syndrome; cellular proliferation; epidermal growth factor; cell development; apoptosis; cell adhesion; growth migration; cell structure; motility; cancer; immune disorder; inflammatory disorder; cellular adhesion disorder; long-QT syndrome; cardiovascular disease, hypertrophic cardiomyopathy; marfan syndrome; therapy; NOV1; NOV2; NOV3; NOV4; NOV5; NOV6; NOV7; NOV8; NOV9; NOV10; NOV11; NOV12; NOV13; NOV14; NOV15; NOV16.
                                     This sequence is the NOV2 protein. The invention relates to the NOV1-NOV16 proteins, and their coding sequences. The proteins have Cytostatic; contraceptive; antiinflammatory; immunomodulatory; and cardiovascular activities. The sequences may be used in the prevention diagnosis and treatment of diseases associated with inappropriate NOVX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1188

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 expression and activity. The anti-NOVX Abs are used for detecting the presence of NOVX in samples. Disorders that may be prevented, diagnosed and/or treated vary depending on the NOVX protein. NOVI, NOV5, NOV5, NOV9, NOV9-11 and NOVI3-16 have casein kinase II phosphorylation sites characteristic of serine/threonine kinases, and are used to treat kinase-related disorders (e.g. Peutz-Jeghers syndrome, cellular proliferation and contraception). NOV2-3, NOV6 and NOV8 are homologous the epidermal growth factor (BGF)-like super family and are involved in e.g. regulation of cell development, apoptosis, cell adhesion, growth migration, cell structure and motility and protein management, and are used to treat cancers, inflammatory disorders, immune disorders and and allocated the structure and motility and protein management, and are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               produce NOVX proteins, by inserting the nucleic acid into a cell and culturing it to express the protein. The DNA may be used as DNA probes i assays to detect and quantitate the presence of similar DNAs in samples, and which patients may need restorative therapy. The NOVX protein may be used as antigens in the production of antibodies (Abs) against any protein and the production of antibodies (Abs) against
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            NOVX and in assays to identify modulators of NOVX expression and activity. The anti-NOVX Abs and antagonist are used to down regu

Cytostatic; contraceptive; antiinflammatory; immunomodilatory; and criefly sequences may be used in the prevention, CC diagnosis and treatment of diseases associated with inappropriate NOVX CC expression. They may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of protein by expressing inactive proteins or to CC supplement the patients own production of protein frequency cell and CC culturing it to express the protein of protein associated with decreased CC unituring it to express the protein of protein frequency cell and CC culturing it to express the protein. The DNA may be used as DNA protein may cell assays to detect and quantitate the presence of similar DNAs in samples, CC and which patients may need restorative therapy. The NOVX protein may CC also be used as antigens in the production of antibodies (Abs) against CC NOVX and in assays to identify modulators of NOVX protein may CC activity. The anti-NOVX Abs and antagonist are used to down regulate presence of NOVX in samples. Disorders that may be prevented, diagnosed and/or treated vary depending on the NOVX protein. NOV1, NOV3, NOV5, NOV7, NOV9-11 and NOV13-16 have casein kinase II phosphorylation sites CC characteristic of serine/threonine kinases, and are used to treat CC winase-related disorders (e.g. Peutz-Jeghers syndrome, cellular country cell development, apoptosis, cell adhesion, growth factor (EGF) like super family and are involved in, cell structure and motility and protein management, and are used to treat the country inflammatory disorders, immune disorders and country in the modulatory of cell adhesion, growth to read to treat cancers, inflammatory disorders, immune disorders and country in the modulation of cell development, apoptosis, cell adhesion, growth country in the modulation of cell development and country to EGF-like
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                29-NOV-1999;

Cytostatic; contraceptive; antiinflammatory; immunomodulatory; and cardiovascular activities. The sequences may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate NOVX expression. They may be used to treat disorders associated with decreas expression by rectifying mutations or deletions in a patient's genome that affect the activity of protein by expressing inactive proteins or supplement the patients own production of protein. They are used to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC produce NOVX proteins, by inserting the nucleic acid into a cell and CC culturing it to express the protein. The DNA may be used as DNA probes in CC assays to detect and quantitate the presence of similar DNAs in samples, CC and which patients may need restorative therapy. The NOVX protein may CC also be used as antigens in the production of antibodies (Abs) against CC NOVX and in assays to identify modulators of NOVX expression and CC activity. The anti-NOVX Abs and antagonist are used to down regulate CC expression and activity. The anti-NOVX Abs are used for detecting the CC presence of NOVX is samples. Disorders that may be prevented, diagnosed CC and/or treated vary depending on the NOVX protein. NOV1, NOV3, NOV5, CC NOV7, NOV9-11 and NOV13-16 have casein kinase II phosphorylation sites CC characteristic of serine/threonine kinases, and are used to treat CC kinase-related disorders (e.g. Peutz-Jeghers syndrome, cellular CC consideration and contraception). NOV2-3, NOV6 and NOV8 are homologous to the epidermal growth factor (EGF)-like super family and are involved in, CC e.g. regulation of cell development, apoptosis, cell adhesion, growth CC migration, cell structure and motility and protein management, and are used to treat cancers, inflammatory disorders, immune disorders and CC cellular adhesion disorders. NOV6-10 are homologous to EGF-like CC NOVETTODHIC cardiomyconsthy. long-OR syndrome and marfan syndrome.

                                                                                                                  Ş
                                                                                                                                                                                                                                                                                                              Cytostatic; contraceptive; antinfiammatory; immunomodulatory; and cried of diseases associated with inappropriate NOVX contraceptive; antinfiammatory; immunomodulatory; and diseases associated with inappropriate NOVX contraceptive; and treatment of diseases associated with inappropriate NOVX contraceptive; and diseases associated with inappropriate NOVX contraception. They may be used to treat disorders associated with decreased contraception. They may be used to treat disorders associated with decreased contraception by rectifying mutations or deletions in a patient's genome contraception. They are used to produce NOVX proteins, by inserting the nucleic acid into a cell and contraception; by inserting the nucleic acid into a cell and contraception in the production of antibodies (Abs) against condition by expressing inactive probes in assays to detect and quantitate the presence of similar DNAs in samples, and which patients may need restorative therapy. The NOVX protein may cartivity. The anti-NOVX Abs and antagonist are used to down regulate conversation and activity. The anti-NOVX abs are used for detecting the conversation and activity. The anti-NOVX abs are used for detecting the conversation and activity. The anti-NOVX protein. NOV1, NOV1, NOV2, NOV2-11 and NOV1-16 have casein kinase II phosphorylation sites characteristic of serine/threonine kinases, and are used to treat conversation and contraception. NOV2-3, NOV5 and NOV8 are homologous to the epidermal growth factor (EGF)-like super family and are involved in, e.g. regulation of cell development, apoptosis, cell adhesion, growth migration, cell structure and motility and protein management, and are used to treat cancers, inflammatory discorders, immune disorders and cellular candidates and are used to treat cancers, inflammatory discorders and are homologous to EGF-like therefore the cardiovocathy. Inco-07 syndrome and marfan syndrome.

```
CC produce Novx proteins, by inserting the nucleic acid into a cell and CC culturing it to express the protein The DNA may be used as DNA probes in CC assays to detect and quantitate the presence of similar DNAs in samples, CC and which patients may need restorative therapy. The NOVX protein may CC also be used as antigens in the production of antibodies (Abs) against CC NOVX and in assays to identify modulators of NOVX expression and CC activity. The anti-NOVX Abs and antagonist are used to down regulate CC expression and activity. The anti-NOVX Abs are used for detecting the CC presence of NOVX in samples. Disorders that may be prevented, diagnosed CC and/or treated vary depending on the NOVX protein. NOV1, NOV3, NOV5, CC NOV7, NOV9-11 and NOV13-16 have casein kinase II phosphorylation sites CC characteristic of serine/threonine kinases, and are used to treat kinase-related disorders (e.g. Peutz-Jeghers syndrome, cellular CC the epidermal growth factor (BCF)-like super family and are involved in, CC e.g. regulation of cell development, apoptosis, cell adhesion, growth are used to treat cancers, inflammatory disorders, immune disorders and are used to treat cancers, inflammatory disorders, immune disorders and
                                         cellular adhesion disorders. NOV6-10 are homologous to EGF-like fibrillin proteins and are used to treat cardiovascular disease hypertrophic cardiomyopathy, long-QT syndrome and marfan syndrom \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        expression. They may be used to treat disorders associated with decree expression by rectifying mutations or deletions in a patient's genome that affect the activity of protein by expressing inactive proteins or supplement the patients own production of protein. They are used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                diagnosis and treatment of diseases associated with inappropriate NOVX expression. They may be used to treat disorders associated with decreased
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Cytostatic; contraceptive; antiinflammatory; immunomodulatory; and

                                                                                                                                                                              The present sequence represents a hyaluronan-binding protein. The specification describes four hyaluronan-binding protein, known as WF-HABP, WF-HABP, OE-HABP, and BM-HABP. The polypeptides are useful for treating diseases such as proliferative conditions, metastasis, inflammation, ischemia, host defence dysfunction, immune surveillance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A human hyaluronan-binding protein,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        QΥ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      멍
B
                                       It is encoded by an open reading frame contained within the sequence of clone 533 which was derived from an E. tenella genomic library screened with radioactively labelled cDNA encoding the GX5401 antigen. It is of about 250 Kd. It carries several repeated peptide sequences and is rich in cysteine residues. The open reading frame also encodes a potential signal sequence for protein secretion. Also new are an expression vector contg. cloned gene, and host cells transformed with the vector. The transformed cells are used in a vaccine to immunise birds against avian coccidiosis. By labelling the peptides, they can be used as a type-specific probe. May also be used in an assay to detect a bagainst the coccidia. The Abs are used to identify transformed cells
                                                                                                                                                                                                                                                  Cloned gene or fragment encoding antigenic protein which binds with antibodies against avian coccidia. transformed cells used in vaccine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1320

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RESULT
                                                                  polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (CR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful for treating imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics forensics can manning identification of mutations.
diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human
                                                                                                                                                                                                                                                                                                                                                                                        New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1230

```

capable of detecting 1000 or more genes from Drosophila. The invent useful in developmental biology and in elucidating cell signalling cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072).

[ABB57737-ABB72072]

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from

The invention relates to an isolated nucleic acid detection reagent

                                                                                                                         This sequence represents the human Notch3 protein, a transmembrane receptor protein involved in lateral inhibition and regulating developmental cascades of neurogenic genes. Mutated Notch3 proteins are thought to be involved in neurological disorders, especially of the cerebral autosomal dominant arteriopathy with subcortical infarcts and leukoencephalopathy (CADASIL) type. Blocking expression of a
